### Amazon.com Review

On April 13, 1970, three American astronauts were on their way to the moon when a mysterious explosion rocked their ship, forcing them to abandon the main ship and spend four days in the tiny lunar module which was intended to support two men for two days. A harrowing story of danger, courage and brilliant off-the-cuff engineering solutions which resulted in a dramatic rescue.

### Review

A thrilling story of...disaster and incredible heroism... -- *James Michener, author of Space*

### From the Publisher

On April 13, 1970, astronauts Jim Lovell, Fred Haise, and Jack Swigert were hurtling along in the Apollo 13 spacecraft, on America's fifth mission to the moon, when a mysterious explosion rocked the ship. The cockpit grew dim, the air grew thin, and the instrument lights winked out. Moments later, the astronauts were forced to abandon the main for the tiny lunar module, designed to keep two men alive for just two days. But there were now three men aboard, and they were four days from home. As the action shifts from the disabled ship to the frantic engineers at Mission Control to Lovell's anxious family, *Apollo 13* brilliantly recreates the harrowing, heroic rescue mission in all its drama and glory.
