Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) By Rino Micheloni, Alessia Marelli, Kam Eshghi

Solid State Drives (SSDs) are gaining momentum in enterprise and client applications, replacing Hard Disk Drives (HDDs) by offering higher performance and lower power. In the enterprise, developers of data center server and storage systems have seen CPU performance growing exponentially for the past two decades, while HDD performance has improved linearly for the same period. Additionally, multi-core CPU designs and virtualization have increased randomness of storage I/Os. These trends have shifted performance bottlenecks to enterprise storage systems. Business critical applications such as online transaction processing, financial data processing and database mining are increasingly limited by storage performance.

In client applications, small mobile platforms are leaving little room for batteries while demanding long life out of them. Therefore, reducing both idle and active power consumption has become critical. Additionally, client storage systems are in need of significant performance improvement as well as supporting small robust form factors. Ultimately, client systems are optimizing for best performance/power ratio as well as performance/cost ratio.

SSDs promise to address both enterprise and client storage requirements by drastically improving performance while at the same time reducing power.

Inside Solid State Drives walks the reader through all the main topics related to SSDs: from NAND Flash to memory controller (hardware and software), from I/O interfaces (PCIe/SAS/SATA) to reliability, from error correction codes (BCH and LDPC) to encryption, from Flash signal processing to hybrid storage. We hope you enjoy this tour inside Solid State Drives.

From the reviews:

Selected by Computing Reviews as one of the Best Reviews & Notable Books of 2013

“This collection of chapters written by many different authors aims to enlighten the reader on all aspects of SSDs. ... if you are interested in how SSDs really work, this may be the book you are looking for.” (Bernard Kuc, Computing Reviews, July, 2013)

“Detailed book on SSD architecture suitable for new SSD hardware designers, firmware engineers who want to get up to speed quickly. The book offers a systematic overview starting with how HDD differ from SSDs, how NAND arrays operate, how SATA, SAS, PCIe SSDs differ, how supercaps differ from tantalum caps. ... Unique features: Overview of hybrid SSDs, math behind BCH codes.” (R. Prakash, Amazon.com, July, 2013)

About the Author

Rino Micheloni (rino.micheloni@ieee.org) is Lead Flash Technologist at IDT (Integrated Device Technology). He has 18 years experience in NAND/NOR Flash memory design, architecture and algorithms as well as the related intellectual property. Before IDT, he was Senior Principal for Flash and Director of

Qimonda's design center in Italy, developing 36 nm and 48 nm NAND memories. From 2001 to 2006 he managed the Napoli design center of STMicroelectronics focusing on the development of 90 nm and 60 nm MLC NAND Flash. Before that, he led the development of MLC NOR Flash. He is co-author of 103 U.S. patents and five Springer books on NOR/NAND/ECC/SSD. He is IEEE Senior Member and received the STMicroelectronics Exceptional Patent in 2003 and 2004, and the Qimonda IP Award in 2007.

Alessia Marelli was born in Bergamo, Italy in 1980. She received her degree in Mathematical Science from “Università degli Studi di Milano – Bicocca”, Italy in 2003 with a thesis about ECC applied to Flash Memories. In 2003 she joined STMicroelectronics, Agrate B., Italy. She was involved in digital design of Multilevel NAND Memories, especially redundancy, ECC and algorithms. In 2007, she joined Qimonda as senior digital designer. In 2009 she joined Integrated Device Technology (IDT) as senior digital designer, where she takes care of ECC applied to SSD. She is co-author of some patents regarding Redundancy and ECC applied to Flash Memories. She is co-author of *Memories in Wireless Systems* (Springer, 2008), *Error Correction Codes for Non-Volatile Memories* (Springer, 2008), *Inside NAND Flash Memories* (Springer, 2010).

Kam Eshghi is Sr. Director of Marketing in Enterprise Computing Division of IDT. Kam leads IDT's business strategy, marketing and business development for flash controllers and PCIe switches. Kam drove the creation of IDT's PCIe Enterprise Flash Controller product line and established IDT as a leader in this market.

Kam has more than 18 years of industry experience. Prior to joining IDT, Kam built product lines in server and networking markets at HP, Intel, Crosslayer Networks, and Synopsys. During his time at Intel, Kam led a team to define strategy and product roadmaps for server chipsets. Previous to that as Vice President of Marketing and Business Development at Crosslayer Networks, Kam defined a family of Ethernet-IP switch processors and led all customer engagements, ultimately leading to LSI's acquisition.

Kam holds a M.S. in Electrical Engineering & Computer Science from Massachusetts Institute of Technology, and a Master's in Business Administration and B.S. in Electrical Engineering & Computer Science both from University of California at Berkeley.

Users Review

From reader reviews:

Roy Christy:

Here thing why this specific Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) are different and trusted to be yours. First of all reading through a book is good but it really depends in the content than it which is the content is as yummy as food or not. Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) giving you information deeper including different ways, you can find any publication out there but there is no publication that similar with Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics). It gives you thrill studying journey, its open up your eyes about the thing that happened in the world which is maybe can be happened around you. It is possible to bring everywhere like in park, café, or even in your approach home by train. Should you be having difficulties in bringing the paper book maybe the form of Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) in e-book can be your alternate.

Jackie Sneller:

Often the book Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) has a lot of info on it. So when you check out this book you can get a lot of profit. The book was written by the very famous author. Mcdougal makes some research just before write this book. This kind of book very easy to read you can obtain the point easily after looking over this book.

Larry Valadez:

Playing with family in a very park, coming to see the marine world or hanging out with buddies is thing that usually you will have done when you have spare time, subsequently why you don't try matter that really opposite from that. Just one activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics), you may enjoy both. It is fine combination right, you still would like to miss it? What kind of hangout type is it? Oh come on its mind hangout men. What? Still don't obtain it, oh come on its identified as reading friends.

Brent Campbell:

Reading a guide make you to get more knowledge from the jawhorse. You can take knowledge and information coming from a book. Book is prepared or printed or descriptive from each source this filled update of news. In this modern era like now, many ways to get information are available for you actually. From media social such as newspaper, magazines, science guide, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Are you ready to spend your spare time to spread out your book? Or just trying to find the Inside Solid State Drives (SSDs) (Springer Series in Advanced Microelectronics) when you desired it?
