# An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics)

By Howard J. Wilcox, David L. Myers

An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics) By Howard J. Wilcox, David L. Myers

This book arose out of the authors' desire to present Lebesgue integration and Fourier series on an undergraduate level, since most undergraduate texts do not cover this material or do so in a cursory way. The result is a clear, concise, well-organized introduction to such topics as the Riemann integral, measurable sets, properties of measurable sets, measurable functions, the Lebesgue integral, convergence and the Lebesgue integral, pointwise convergence of Fourier series and other subjects.

The authors not only cover these topics in a useful and thorough way, they have taken pains to motivate the student by keeping the goals of the theory always in sight, justifying each step of the development in terms of those goals. In addition, whenever possible, new concepts are related to concepts already in the student's repertoire.

Finally, to enable readers to test their grasp of the material, the text is supplemented by numerous examples and exercises. Mathematics students as well as students of engineering and science will find here a superb treatment, carefully thought out and well presented , that is ideal for a one semester course. The only prerequisite is a basic knowledge of advanced calculus, including the notions of compactness, continuity, uniform convergence and Riemann integration.

Editorial Review

Users Review

From reader reviews:

Lawrence Scuderi:

Do you have favorite book? Should you have, what is your favorite's book? Reserve is very important thing for us to be aware of everything in the world. Each e-book has different aim or maybe goal; it means that e-book has different type. Some people sense enjoy to spend their time and energy to read a book. They are really reading whatever they take because their hobby is actually reading a book. What about the person who don't like studying a book? Sometime, person feel need book after they found difficult problem as well as exercise. Well, probably you will need this An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics).

Eleanor Walker:

Reading a e-book can be one of a lot of pastime that everyone in the world really likes. Do you like reading book therefore. There are a lot of reasons why people love it. First reading a publication will give you a lot of new data. When you read a reserve you will get new information because book is one of many ways to share the information or their idea. Second, reading through a book will make a person more imaginative. When you looking at a book especially fictional works book the author will bring that you imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other people. When you read this An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics), you may tells your family, friends as well as soon about yours book. Your knowledge can inspire the others, make them reading a guide.

Nancy Page:

An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics) can be one of your nice books that are good idea. Most of us recommend that straight away because this book has good vocabulary that could increase your knowledge in vocab, easy to understand, bit entertaining however delivering the information. The copy writer giving his/her effort to place every word into delight arrangement in writing An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics) but doesn't forget the main position, giving the reader the hottest along with based confirm resource details that maybe you can be one of it. This great information may drawn you into new stage of crucial imagining.

John Smith:

In this period of time globalization it is important to someone to obtain information. The information will make you to definitely understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of recommendations to get information example: internet, magazine, book, and soon. You can view that now, a lot of publisher which print many kinds of book. Typically the book that recommended for you is An Introduction to Lebesgue Integration and Fourier Series (Dover Books on Mathematics) this book consist a lot of the information in the condition of this world now. This specific book was represented how do the world has grown up. The language styles that writer require to explain it is easy to understand. Typically the writer made some investigation when he makes this book. Honestly, that is why this book suited all of you.
