## Elementary Differential Equations with Boundary Value Problems, 5th Edition

By C. Henry Edwards, David E. Penney

This accessible, attractive, and interesting book enables readers to first solve those differential equations that have the most frequent and interesting applications. This approach illustrates the standard elementary techniques of solution of differential equations. Precise and clear-cut statements of fundamental existence and uniqueness theorems allow understanding of their role in this subject. A strong numerical approach emphasizes that the effective and reliable use of numerical methods often requires preliminary analysis using standard elementary techniques. The first few sections of most chapters introduce the principle ideas of each topic, with remaining sections devoted to extensions and applications. Topics covered include first-order differential equations, linear equations of higher order, power series methods, Laplace transform methods, linear systems of differential equations, numerical methods, nonlinear systems and phenomena, Fourier series methods, and Eigenvalues and boundary value problems. For those involved in the fields of science, engineering, and mathematics.

### **Editorial Review**

#### From the Publisher

Focused on the standard elementary techniques of solution of differential equations and the mathematical modeling of real-world situations, this book anticipates and addresses the questions and difficulties typically encountered by those studying the subject for the first time.

#### From the Back Cover

**Key Benefit:** Anticipates and addresses the questions and difficulties that students typically encounter when they study standard elementary techniques of solution of differential equations and the mathematical modeling of real-world situations. **Key Topics:** Features computer-generated artwork to illustrate geometric aspects of differential equations; revised discussion of numerical methods; simple BASIC programs; and over 1800 computational drill problems and diverse applications to help explain first order differential equations, linear equations of higher order, nonlinear differential equations and systems, fourier series and separation of variables, Eigenvalues and boundary value problems. and more. **Market:** For sophomore/junior-level professors of differential equations.

#### About the Author

C. Henry Edwards is emeritus professor of mathematics at the University of Georgia. He earned his Ph.D. at the University of Tennessee in 1960, and recently retired after 40 years of classroom teaching (including calculus or differential equations almost every term) at the universities of Tennessee, Wisconsin, and Georgia, with a brief interlude at the Institute for Advanced Study (Princeton) as an Alfred P. Sloan Research Fellow. He has received numerous teaching awards, including the University of Georgia's honoratus medal in 1983 (for sustained excellence in honors teaching), its Josiah Meigs award in 1991 (the institution's highest award for teaching), and the 1997 statewide Georgia Regents award for research university faculty teaching excellence. His scholarly career has ranged from research and dissertation direction in topology to the history of mathematics to computing and technology in the teaching and applications of mathematics. In addition to being author or co-author of calculus, advanced calculus, linear algebra, and differential equations textbooks, he is well-known to calculus instructors as author of *The Historical Development of the Calculus* (Springer-Verlag, 1979). During the 1990s he served as a principal investigator on three NSF-supported projects: (1) A school mathematics project including Maple for beginning algebra students, (2) A Calculus-with-Mathematica program, and (3) A MATLAB-based computer lab project for numerical analysis and differential equations students. David E. Penney, University of Georgia, completed his Ph.D. at Tulane University in 1965 (under the direction of Prof. L. Bruce Treybig) while teaching at the University of New Orleans. Earlier he had worked in experimental biophysics at Tulane University and the Veteran's Administration Hospital in New Orleans under the direction of Robert Dixon McAfee, where Dr. McAfee's research team's primary focus was on the active transport of sodium ions by biological membranes. Penney's primary contribution here was the development of a mathematical model (using simultaneous ordinary differential equations) for the metabolic phenomena regulating such transport, with potential future applications in kidney physiology, management of hypertension, and treatment of congestive heart failure. He also designed and constructed servomechanisms for the accurate monitoring of ion transport, a phenomenon involving the measurement of potentials in microvolts at impedances of millions of megohms. Penney began teaching calculus at Tulane in 1957 and taught that course almost every term with enthusiasm and distinction until his retirement at the end of the last millennium. During his tenure at the University of Georgia he received numerous University-wide teaching awards as well as directing several doctoral dissertations and seven undergraduate research projects. He is the author of research papers in number theory

and topology and is the author or co-author of textbooks on calculus, computer programming, differential equations, linear algebra, and liberal arts mathematics.

## **Users Review**

### **From reader reviews:**

#### **James Oliver:**

In this 21st one hundred year, people become competitive in most way. By being competitive at this point, people have do something to make these survives, being in the middle of the crowded place and notice by simply surrounding. One thing that sometimes many people have underestimated this for a while is reading. Sure, by reading a e-book your ability to survive boost then having chance to remain than other is high. For yourself who want to start reading some sort of book, we give you this specific Elementary Differential Equations with Boundary Value Problems, 5th Edition book as beginning and daily reading guide. Why, because this book is usually more than just a book.

#### **Susan Jun:**

Does one one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try and pick one book that you find out the inside because don't assess book by its include may doesn't work at this point is difficult job because you are afraid that the inside maybe not while fantastic as in the outside search likes. Maybe you answer might be Elementary Differential Equations with Boundary Value Problems, 5th Edition why because the excellent cover that make you consider regarding the content will not disappoint you. The inside or content is usually fantastic as the outside as well as cover. Your reading sixth sense will directly direct you to pick up this book.

#### **Ella Norman:**

You may spend your free time to read this book this guide. This Elementary Differential Equations with Boundary Value Problems, 5th Edition is simple to bring you can read it in the park, in the beach, train in addition to soon. If you did not possess much space to bring typically the printed book, you can buy typically the e-book. It is make you much easier to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when you buy this book.

#### **Mary Scruggs:**

Reserve is one of source of know-how. We can add our expertise from it. Not only for students and also native or citizen will need book to know the upgrade information of year to help year. As we know those guides have many advantages. Beside many of us add our knowledge, can also bring us to around the world. Through the book Elementary Differential Equations with Boundary Value Problems, 5th Edition we can acquire more advantage. Don't you to be creative people? For being creative person must prefer to read a book. Just simply choose the best book that ideal with your aim. Don't always be doubt to change your life with that book Elementary Differential Equations with Boundary Value Problems, 5th Edition. You can more pleasing than now.
