Histopathology of the Salivary Glands By Henrik Hellquist, Alena Skalova

Over the last 25 years it has become more and more evident that salivary gland pathology is by far the subject within head and neck pathology that causes most diagnostic challenges and problems for general pathologists. During courses the author has given, consultants and trainees alike have expressed the lack of a comprehensive, useful book on salivary gland pathology. Such a book needs to be broad and to illustrate almost every variant of all tumor entities. Another important feature to incorporate is the newly gained knowledge about genetics in salivary gland tumors, a knowledge that has emerged during the last 3-4 years only (and is growing continuously). A mapping of the immunophenotypes of salivary gland tumors is neither available today and will greatly benefit in routine diagnostic work.

Editorial Review

From the Back Cover

Over the past 25 years it has become more and more evident that salivary gland pathology is by far the subject within head and neck pathology that causes the most diagnostic challenges and problems for general pathologists. Among the reasons for this are the relative rarity of salivary gland tumors (as a result of which the general pathologist does not gain sufficient personal experience in their diagnosis), their striking diversity (there are almost 40 different histological tumor entities), and the fact that some tumours dedifferentiate and some benign tumors progress to become malignant.

This book is a comprehensive guide to salivary gland pathology that illustrates almost every type of salivary gland tumor and will assist greatly in routine diagnostic work. Non-neoplastic lesions, benign epithelial tumors, malignant epithelial tumors, and non-epithelial and secondary tumors are all covered in detail, and the WHO and TNM classifications are clearly explained. Another significant feature is the incorporation of important knowledge gained during the past few years regarding the genetics of salivary gland tumors.

Histopathology of the Salivary Glands will be of interest not only to

pathologists but also to dentists, ENT and head and neck surgeons, and oncologists.
