### Introduction to Aerospace Materials (AIAA Education Series) By Adrian P. Mouritz

The structural materials used in airframe and propulsion systems influence the cost, performance, and safety of aircraft, and an understanding of the wide range of materials used and the issues surrounding them is essential for the student of aerospace engineering. Introduction to Aerospace Materials reviews the main structural and engine materials used in aircraft, helicopters, and spacecraft in terms of their production, properties, performance, and applications. The first three chapters of the book introduce the reader to the range of aerospace materials, focusing on recent developments and requirements. Following these introductory chapters the book moves on to discuss the properties and production of metals for aerospace structures, including chapters covering strengthening of metal alloys, mechanical testing, and the casting, processing, and machining of aerospace metals. The next 10 chapters look in depth at individual metals including aluminum, titanium, magnesium, steel, and superalloys, as well as the properties and processing of polymers, composites, and wood. Chapters on performance issues such as fracture, fatigue, and corrosion precede a chapter focusing on inspection and structural health monitoring of aerospace materials. Disposal/recycling and materials selection are covered in the final two chapters. With its comprehensive coverage of the main issues surrounding structural aerospace materials, Introduction to Aerospace Materials is essential reading for undergraduate students studying aerospace and aeronautical engineering. It will also be a valuable resource for postgraduate students and practicing aerospace engineers.

## **Editorial Review**

Review

*"This comprehensive undergraduate text is descriptive, mathematical and factual in equal measure. This is a sound, well-written text that encourages one to read on - a text no undergraduate (worth his/her place) would ever call boring."--The Aeronautical Journal, August 2013* *"This comprehensive undergraduate text is descriptive, mathematical and factual in equal measure. This is a sound, well-written text that encourages one to read on - a text no undergraduate (worth his/her place) would ever call boring. The book is good value for money." --The Aeronautical Journal*

About the Author

Adrian P. Mouritz is Professor of Aerospace Materials at the Royal Melbourne Institute of Technology, Australia.

## **Users Review**

**From reader reviews:**

**Mitchell Diaz:**

What do you in relation to book? It is not important along with you? Or just adding material when you want something to explain what yours problem? How about your free time? Or are you busy particular person? If you don't have spare time to perform others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Every person has many questions above. They should answer that question since just their can do which. It said that about book. Book is familiar in each person. Yes, it is proper. Because start from on jardín de infancia until university need this Introduction to Aerospace Materials (AIAA Education Series) to read.

**Robin Holloway:**

Typically the book Introduction to Aerospace Materials (AIAA Education Series) has a lot details on it. So when you make sure to read this book you can get a lot of gain. The book was authored by the very famous author. Tom makes some research ahead of write this book. This book very easy to read you may get the point easily after reading this book.

**Rex Oswald:**

Do you really one of the book lovers? If yes, do you ever feeling doubt if you are in the book store? Try and pick one book that you find out the inside because don't assess book by its protect may doesn't work the following is difficult job because you are frightened that the inside maybe not while fantastic as in the outside appear likes. Maybe you answer can be Introduction to Aerospace Materials (AIAA Education

Series) why because the wonderful cover that make you consider about the content will not disappoint anyone. The inside or content is definitely fantastic as the outside or maybe cover. Your reading sixth sense will directly assist you to pick up this book.

**Yolanda Matlock:**

This Introduction to Aerospace Materials (AIAA Education Series) is great book for you because the content which is full of information for you who have always deal with world and also have to make decision every minute. This book reveal it info accurately using great manage word or we can point out no rambling sentences included. So if you are read that hurriedly you can have whole details in it. Doesn't mean it only provides straight forward sentences but hard core information with wonderful delivering sentences. Having Introduction to Aerospace Materials (AIAA Education Series) in your hand like keeping the world in your arm, facts in it is not ridiculous one particular. We can say that no reserve that offer you world in ten or fifteen small right but this guide already do that. So , this can be good reading book. Hey Mr. and Mrs. busy do you still doubt this?
