Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics)

By Mehran Mesbahi, Magnus Egerstedt

Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) By Mehran Mesbahi, Magnus Egerstedt

This accessible book provides an introduction to the analysis and design of dynamic multiagent networks. Such networks are of great interest in a wide range of areas in science and engineering, including: mobile sensor networks, distributed robotics such as formation flying and swarming, quantum networks, networked economics, biological synchronization, and social networks. Focusing on graph theoretic methods for the analysis and synthesis of dynamic multiagent networks, the book presents a powerful new formalism and set of tools for networked systems.

The book's three sections look at foundations, multiagent networks, and networks as systems. The authors give an overview of important ideas from graph theory, followed by a detailed account of the agreement protocol and its various extensions, including the behavior of the protocol over undirected, directed, switching, and random networks. They cover topics such as formation control, coverage, distributed estimation, social networks, and games over networks. And they explore intriguing aspects of viewing networks as systems, by making these networks amenable to control-theoretic analysis and automatic synthesis, by monitoring their dynamic evolution, and by examining higher-order interaction models in terms of simplicial complexes and their applications.

The book will interest graduate students working in systems and control, as well as in computer science and robotics. It will be a standard reference for researchers seeking a self-contained account of system-theoretic aspects of multiagent networks and their wide-ranging applications.

This book has been adopted as a textbook at the following universities:

- University of Stuttgart, Germany
- Royal Institute of Technology, Sweden
- Johannes Kepler University, Austria
- Georgia Tech, USA
- University of Washington, USA

- Ohio University, USA

Editorial Review

Review
"Presently, there are few books on multiagent systems. Thus, this book can be a useful reference book for graduate students and researchers focusing on systems, controls, and robotics, and help them to better know and study multiagent systems."**--Long Wang, *Mathematical Reviews***

From the Back Cover

"This well-organized book is an extensive and complete introduction to graph theoretic methods in the context of multiagent and multivehicle cooperative networks. The presentation of the material is elegant and in addition to basic results, the book includes new topics not commonly found in the literature. Ideal for graduate students and researchers, the book represents a significant contribution to the emerging field of cooperative control and consensus."**--Randy Beard, Brigham Young University**

"This comprehensive overview of multiagent coordination brings together the existing literature on the subject and presents it in a clean, pedagogical fashion. The book will be useful to those in the areas of control theory, signal processing, and related disciplines."**--Ali Jadbabaie, University of Pennsylvania**

"This book focuses on graph theoretic techniques in multiagent systems, with a strong emphasis on agreement problems. It covers a good selection of issues and will make a solid textbook for advanced courses in the field."**--Richard Murray, California Institute of Technology**

About the Author
Mehran Mesbahi is associate professor of aeronautics and astronautics at the University of Washington. Magnus Egerstedt is associate professor of electrical and computer engineering at Georgia Institute of Technology.

Users Review

From reader reviews:

Jolie Browne:

Do you certainly one of people who can't read gratifying if the sentence chained within the straightway, hold on guys this kind of aren't like that. This Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) book is readable by means of you who hate the straight word style. You will find the info here are arrange for enjoyable reading experience without leaving perhaps decrease the knowledge that want to supply to you. The writer associated with Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) content conveys the idea easily to understand by lots of people. The printed and e-book are not different in the information but it just different available as it. So , do you continue to thinking Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) is not loveable to be your top list reading book?

Ernest Maguire:

In this era globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The condition of the world makes the information quicker to share. You can find a lot of personal references to get information example: internet, paper, book, and soon. You will observe that now, a lot of publisher which print many kinds of book. Often the book that recommended for your requirements is Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) this publication consist a lot of the information of the condition of this world now. This kind of book was represented how can the world has grown up. The dialect styles that writer use to explain it is easy to understand. The particular writer made some investigation when he makes this book. Honestly, that is why this book ideal all of you.

Jake Harris:

In this era which is the greater man or woman or who has ability in doing something more are more important than other. Do you want to become among it? It is just simple strategy to have that. What you have to do is just spending your time little but quite enough to have a look at some books. On the list of books in the top checklist in your reading list is actually Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics). This book which is qualified as The Hungry Slopes can get you closer in turning out to be precious person. By looking upwards and review this publication you can get many advantages.

Lena Lewis:

Publication is one of source of information. We can add our know-how from it. Not only for students and also native or citizen want book to know the up-date information of year for you to year. As we know those publications have many advantages. Beside many of us add our knowledge, could also bring us to around the world. With the book Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics) we can get more advantage. Don't someone to be creative people? To be creative person must like to read a book. Only choose the best book that ideal with your aim. Don't become doubt to change your life with this book Graph Theoretic Methods in Multiagent Networks (Princeton Series in Applied Mathematics). You can more desirable than now.
