Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology By Willem van Meurs

THEORY AND PRACTICE OF MODELING AND SIMULATING HUMAN PHYSIOLOGY

Written by a coinventor of the Human Patient Simulator (HPS) and past president of the Society in Europe for Simulation Applied to Medicine (SESAM), *Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology* is a compact and consistent introduction to this expanding field. The book divides the modeling and simulation process into five manageable steps--requirements, conceptual models, mathematical models, software implementation, and simulation results and validation.

A framework and a basic set of deterministic, continuous-time models for the cardiorespiratory system are provided. This timely resource also addresses advanced topics, including sensitivity analysis and setting model requirements as part of an encompassing simulation and simulator design. Practical examples provide you with the skills to evaluate and adapt existing physiologic models or create new ones for specific applications.

Coverage includes:

- Signals and systems
- Model requirements
- Conceptual models
- Mathematical models
- Software implementation
- Simulation results and model validation
- Cardiorespiratory system model
- Circulation
- Respiration
- Physiologic control
- Sensitivity analysis of a cardiovascular model
- Design of model-driven acute care training simulators

“Uniquely qualified to author such a text, van Meurs is one of the original developers of CAE Healthcare’s Human Patient Simulator (HPS). ...His understanding of mathematics, human physiology, pharmacology, control systems, and systems engineering, combined with a conversational writing style, results in a readable text. ...The ample illustrations and tables also break up the text and make reading the book easier on the eyes. ...concise yet in conversational style, with real-life examples. This book is highly recommended for coursework in physiologic modeling and for all who are interested in simulator design and development. The book pulls all these topics together under one cover and is an important contribution to biomedical literature.” --*IEEE Pulse*, January 2014

“This book is written by a professional engineer who is unique in that he seems to have a natural understanding of 3 key areas as follows: the hardware involved with simulators, human physiology, and mathematical modeling. Willem van Meurs is one of the inventors of the model-driven human patient simulator (HPS), and so, he is very qualified to write this book. The book is written in a clear way, using the first person throughout, in a conversational manner, with a style that involves posing questions and answering them in subsequent text. ...The book starts with a very useful introduction and background chapter, setting out the scene for the rest of the book. ...I have used his book in enhancing my own talks and understanding human patient simulation and can strongly recommend it.” --*Simulation in Healthcare* December, 2012

Reviewed by Mark A. Tooley, Ph.D., Department of Medical Physics and Bioengineering, Royal United Hospital, Combe Park, Bath, UK.

Editorial Review

About the Author

Willem van Meurs, Ph.D., is the co-inventor of the Human Patient Simulator. He is a consultant at Medical Education Technologies, Inc., and conducts modeling and simulation teaching and research at the University of Porto, Portugal. Dr. van Meurs was the president of the Society in Europe for Simulation Applied to Medicine from 2005-2007. He has published more than 20 full papers in peer-reviewed international journals and books and co-authored eight U.S. patents on modeling and simulation techniques.

Users Review

From reader reviews:

Carrie Wilson:

Nowadays reading books be a little more than want or need but also become a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge even the information inside the book that will improve your knowledge and information. The info you get based on what kind of reserve you read, if you want drive more knowledge just go with education books but if you want really feel happy read one together with theme for entertaining including comic or novel. Typically the Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology is kind of reserve which is giving the reader unstable experience.

Victor Parisi:

Your reading 6th sense will not betray an individual, why because this Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology publication written by well-known writer who knows well how to make book that can be understand by anyone who all read the book. Written throughout good manner for you, leaking every ideas and composing skill only for eliminate your personal hunger then you still doubt Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology as good book but not only by the cover but also with the content. This is one reserve that can break don't determine book by its deal with, so do you still needing yet another sixth sense to pick this particular!?! Oh come on your reading sixth sense already said so why you have to listening to a different sixth sense.

Johnny Sutton:

The book untitled Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology contain a lot of information on the item. The writer explains her idea with easy method. The language is very clear and understandable all the people, so do not necessarily worry, you can easy to read the idea. The book was authored by famous author. The author brings you in the new time of literary works. You can actually read this book because you can keep reading your smart phone, or model, so you can read

the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can open up their official web-site and order it. Have a nice learn.

Harold Smith:

What is your hobby? Have you heard this question when you got students? We believe that that concern was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. So you know that little person including reading or as reading become their hobby. You should know that reading is very important and book as to be the point. Book is important thing to add you knowledge, except your personal teacher or lecturer. You get good news or update about something by book. Amount types of books that can you decide to try be your object. One of them is Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology.
