Data Structures and Algorithms Using Python and C++ By David M. Reed, John Zelle

THIS BOOK is intended for use in a traditional college-level data structures course (commonly known as CS2). This book assumes that students have learned the basic syntax of Python and been exposed to the use of existing classes. Most traditional CS1 courses that use Python will have covered all the necessary topics, and some may have covered a few of the topics covered in this book. We have found that most students successfully completing a CS1 course know how to use classes, but many of them need more experience to learn how to design and write their own classes. We address this issue by including a number of examples of class design in the first few chapters of this book. Python's object-oriented features make it an elegant language for starting a data structures course, but one potential drawback of Python for a data structures course is that it hides the complexity of memory management. This is a benefit in a first course, but we think that in a second course it is important that students begin to understand some of these low-level details that the Python interpreter hides from them. Since we can cover the basic data structures in less time using Python, there is time to learn a second language, even in a single-semester CS2 course. After the students have continued to improve their Python programming skills while covering the first few chapters of the book, it is relatively easy for them to learn a second object-oriented language. By using C++ as the second language, the students are exposed to a lower-level, compiled language. The syntax of C++ is more complicated than Python, but that is a relatively small hurdle once students have mastered fundamental programming concepts using Python. For example, now that they understand the basic concepts of programming and the semantics of statements such as conditional statements and looping statements, they can focus on learning the C++ syntax for these statements.

Editorial Review

Users Review

From reader reviews:

Joan Cross:

What do you about book? It is not important with you? Or just adding material if you want something to explain what the ones you have problem? How about your free time? Or are you busy man? If you don't have spare time to do others business, it is make one feel bored faster. And you have extra time? What did you do? Every individual has many questions above. They need to answer that question simply because just their can do that will. It said that about e-book. Book is familiar in each person. Yes, it is correct. Because start from on guardería until university need this specific Data Structures and Algorithms Using Python and C++ to read.

Allison Sala:

Do you certainly one of people who can't read enjoyable if the sentence chained within the straightway, hold on guys this aren't like that. This Data Structures and Algorithms Using Python and C++ book is readable by means of you who hate the straight word style. You will find the details here are arrange for enjoyable studying experience without leaving possibly decrease the knowledge that want to supply to you. The writer associated with Data Structures and Algorithms Using Python and C++ content conveys thinking easily to understand by most people. The printed and e-book are not different in the content but it just different as it. So , do you still thinking Data Structures and Algorithms Using Python and C++ is not loveable to be your top checklist reading book?

Helen Arnold:

This Data Structures and Algorithms Using Python and C++ are usually reliable for you who want to be described as a successful person, why. The key reason why of this Data Structures and Algorithms Using Python and C++ can be one of the great books you must have is actually giving you more than just simple examining food but feed anyone with information that might be will shock your earlier knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed versions. Beside that this Data Structures and Algorithms Using Python and C++ forcing you to have an enormous of experience including rich vocabulary, giving you tryout of critical thinking that we know it useful in your day task. So , let's have it appreciate reading.

Lucia Stevenson:

This book untitled Data Structures and Algorithms Using Python and C++ to be one of several books that

best seller in this year, here is because when you read this reserve you can get a lot of benefit on it. You will easily to buy this specific book in the book shop or you can order it by using online. The publisher with this book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Mobile phone. So there is no reason for you to past this reserve from your list.
