Separation and Purification Technologies in Biorefineries From Brand: Wiley

Separation and purification processes play a critical role in biorefineries and their optimal selection, design and operation to maximise product yields and improve overall process efficiency. Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes. These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive.

Consequently, a better understanding of separation and purification processes, current and possible alternative and novel advanced methods is essential for achieving the overall techno-economic feasibility and commercial success of sustainable biorefineries.

This book presents a comprehensive overview focused specifically on the present state, future challenges and opportunities for separation and purification methods and technologies in biorefineries.

Topics covered include:

Equilibrium Separations: Distillation, liquid-liquid extraction and supercritical fluid extraction.

Affinity-Based Separations: Adsorption, ion exchange, and simulated moving bed technologies.

Membrane Based Separations: Microfiltration, ultrafiltration and diafiltration, nanofiltration, membrane pervaporation, and membrane distillation.

Solid-liquid Separations: Conventional filtration and solid-liquid extraction.

Hybrid/Integrated Reaction-Separation Systems: Membrane bioreactors, extractive fermentation, reactive distillation and reactive absorption.

For each of these processes, the fundamental principles and design aspects are presented, followed by a detailed discussion and specific examples of applications in biorefineries. Each chapter also considers the market needs, industrial challenges, future opportunities, and economic importance of the separation and purification methods. The book concludes with a series of detailed case studies including cellulosic bioethanol production, extraction of algae oil from microalgae, and production of biopolymers.

Separation and Purification Technologies in Biorefineries is an essential resource for scientists and engineers, as well as researchers and academics working in the broader conventional and emerging bio-based products industry, including biomaterials, biochemicals, biofuels and bioenergy.

Users Review

From reader reviews:

Betty Sanchez:

This Separation and Purification Technologies in Biorefineries book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you have by reading this book will be information inside this book incredible fresh, you will get facts which is getting deeper you read a lot of information you will get. This particular Separation and Purification Technologies in Biorefineries without we know teach the one who examining it become critical in imagining and analyzing. Don't be worry Separation and Purification Technologies in Biorefineries can bring whenever you are and not make your case space or bookshelves' come to be full because you can have it in the lovely laptop even cellphone. This Separation and Purification Technologies in Biorefineries having very good arrangement in word and also layout, so you will not experience uninterested in reading.

Coleman Bailey:

As people who live in the modest era should be update about what going on or data even knowledge to make these keep up with the era and that is always change and advance. Some of you maybe can update themselves by studying books. It is a good choice in your case but the problems coming to a person is you don't know what one you should start with. This Separation and Purification Technologies in Biorefineries is our recommendation to cause you to keep up with the world. Why, because this book serves what you want and wish in this era.

Timothy Montgomery:

Typically the book Separation and Purification Technologies in Biorefineries has a lot associated with on it. So when you check out this book you can get a lot of profit. The book was authored by the very famous author. The author makes some research ahead of write this book. This particular book very easy to read you can get the point easily after looking over this book.

Joseph Esparza:

You can get this Separation and Purification Technologies in Biorefineries by browse the bookstore or Mall. Merely viewing or reviewing it may to be your solve trouble if you get difficulties for your knowledge. Kinds of this book are various. Not only by simply written or printed but can you enjoy this book by means of e-book. In the modern era like now, you just looking by your local mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose right ways for you.
