Uncertain Judgements: Eliciting Experts' Probabilities By Anthony O'Hagan, Caitlin E. Buck, Alireza Daneshkhah, J. Richard Eiser, Paul H. Garthwaite, David J. Jenkinson, Jeremy E. Oakley, Tim Rakow

Elicitation is the process of extracting expert knowledge about some unknown quantity or quantities, and formulating that information as a probability distribution. Elicitation is important in situations, such as modelling the safety of nuclear installations or assessing the risk of terrorist attacks, where expert knowledge is essentially the only source of good information. It also plays a major role in other contexts by augmenting scarce observational data, through the use of Bayesian statistical methods. However, elicitation is not a simple task, and practitioners need to be aware of a wide range of research findings in order to elicit expert judgements accurately and reliably. *Uncertain Judgements* introduces the area, before guiding the reader through the study of appropriate elicitation methods, illustrated by a variety of multi-disciplinary examples.

This is achieved by:

- Presenting a methodological framework for the elicitation of expert knowledge incorporating findings from both statistical and psychological research.
- Detailing techniques for the elicitation of a wide range of standard distributions, appropriate to the most common types of quantities.
- Providing a comprehensive review of the available literature and pointing to the best practice methods and future research needs.
- Using examples from many disciplines, including statistics, psychology, engineering and health sciences.
- Including an extensive glossary of statistical and psychological terms.

An ideal source and guide for statisticians and psychologists with interests in expert judgement or practical applications of Bayesian analysis, *Uncertain Judgements* will also benefit decision-makers, risk analysts, engineers and researchers in the medical and social sciences.

Editorial Review

Review

"This book, written by a group of expert statisticians and psychologists, provides an introduction to the subject and a detailed overview of the existing literature. The book guides the reader through the design of an elicitation method and details examples from a cross section of literature in the statistics, psychology, engineering and health sciences disciplines." (*Zentralblatt Math*, 1 August 2013)

"This is an interesting, well-written book that will be valuable to any decision maker who much rely on expert judgments, any statistician who uses Bayesian statistics, and any researcher who wishes to understand the field of elicitation." (*Journal of the American Statistical Association*, March 2009)

"This book provides an excellent introduction and working reference to the subject of its title and should be an invaluable aid to producers and consumers of expert opinion." (*Biometrics*, September 2008)

"I recommend 'Uncertain Judgements' as an excellent source for a wide variety of research." (*Psychometrika*, March 2008)

"...will be of interest to those who are concerned with or interested primarily in the practicalities of modeling expert judgement and opinion." (*International Journal of Marketing*, January 2007)

From the Back Cover

Elicitation is the process of extracting expert knowledge about some unknown quantity or quantities, and formulating that information as a probability distribution. Elicitation is important in situations, such as modelling the safety of nuclear installations or assessing the risk of terrorist attacks, where expert knowledge is essentially the only source of good information. It also plays a major role in other contexts by augmenting scarce observational data, through the use of Bayesian statistical methods. However, elicitation is not a simple task, and practitioners need to be aware of a wide range of research findings in order to elicit expert judgements accurately and reliably. *Uncertain Judgements* introduces the area, before guiding the reader through the study of appropriate elicitation methods, illustrated by a variety of multi-disciplinary examples.

This is achieved by:

- Presenting a methodological framework for the elicitation of expert knowledge incorporating findings from both statistical and psychological research.
- Detailing techniques for the elicitation of a wide range of standard distributions, appropriate to the most common types of quantities.
- Providing a comprehensive review of the available literature and pointing to the best practice methods and future research needs.
- Using examples from many disciplines, including statistics, psychology, engineering and health sciences.
- Including an extensive glossary of statistical and psychological terms.

An ideal source and guide for statisticians and psychologists with interests in expert judgement or practical applications of Bayesian analysis, *Uncertain Judgements* will also benefit decision-makers, risk analysts,

engineers and researchers in the medical and social sciences.

About the Author

Professor Anthony O'Hagan is the Director of The Centre for Bayesian Statistics in Health Economics at the University of Sheffield. The Centre is a collaboration between the Department of Probability and Statistics and the School of Health and Related Research (ScHARR). The Department of Probability and Statistics is internationally respected for its research in Bayesian statistics, while ScHARR is one of the leading UK centres for economic evaluation.

Prof O'Hagan is an internationally leading expert in Bayesian Statistics.

Co-authors:

Professor Paul Gathwaite – Open University, Prof of Statistics, Maths and Computing

Dr Jeremy Oakley – Sheffield University

Professor John Brazier – Director of Health Economics Group, University of Sheffield

Dr Tim Rakow – University of Essex, Psychology Department

Dr Alireza Daneshkhah – University of Sheffield, Medical Statistics Department

Dr Jim Chilcott - School of Health Research, University of Sheffield, Department of OR

Users Review

From reader reviews:

Lavinia Arthur:

The book *Uncertain Judgements: Eliciting Experts' Probabilities* make you feel enjoy for your spare time. You may use to make your capable more increase. Book can being your best friend when you getting strain or having big problem together with your subject. If you can make looking at a book *Uncertain Judgements: Eliciting Experts' Probabilities* to get your habit, you can get considerably more advantages, like add your own capable, increase your knowledge about several or all subjects. You may know everything if you like available and read a reserve *Uncertain Judgements: Eliciting Experts' Probabilities*. Kinds of book are several. It means that, science book or encyclopedia or others. So , how do you think about this book?

Shawn Holmes:

Book is to be different for each grade. Book for children until eventually adult are different content. We all know that that book is very important normally. The book *Uncertain Judgements: Eliciting Experts' Probabilities* had been making you to know about other expertise and of course you can take more information. It is rather advantages for you. The publication *Uncertain Judgements: Eliciting Experts' Probabilities* is not only giving you much more new information but also for being your friend when you sense bored. You can spend your current spend time to read your book. Try to make relationship with the book *Uncertain Judgements: Eliciting Experts' Probabilities*. You never feel lose out for everything if you

read some books.

Lenore Ryan:

Are you kind of busy person, only have 10 or 15 minute in your moment to upgrading your mind skill or thinking skill also analytical thinking? Then you are having problem with the book in comparison with can satisfy your short period of time to read it because all of this time you only find reserve that need more time to be read. Uncertain Judgements: Eliciting Experts' Probabilities can be your answer as it can be read by you actually who have those short spare time problems.

Carlos Mendoza:

In this particular era which is the greater person or who has ability in doing something more are more valuable than other. Do you want to become certainly one of it? It is just simple way to have that. What you are related is just spending your time not very much but quite enough to possess a look at some books. On the list of books in the top listing in your reading list is Uncertain Judgements: Eliciting Experts' Probabilities. This book which can be qualified as The Hungry Inclines can get you closer in becoming precious person. By looking way up and review this e-book you can get many advantages.
